

Avina Group

Front-end test project

We want you to create a reactjs SPA about contact management with below features:

- A Layout that contains the main section and a side bar
- Inside the main page (or dashboard) create a table that contains user contacts [Firstname, Lastname, Phone number, etc.]
- Also above that table there is a [+ New contact] button that opens a modal. The modal contains a form to add a new contact
- The second page is simple about us page.

The project should be accessible on a public **GIT** repository. It's better if you push codes on a "dev" branch.

Send the git repository URL to below **whatsapp** account:

+98 936 060 9128 (Pedram Dehghanpour [CTO])

Your applyment is appreciated.
